Incident report: merchant portal login failures

Document: INC-401

Date: 2026-04-08

Services: merchant-portal

Summary

SEV2 incident affecting merchant portal login on April 7, 2026. Merchants could not log in to the merchant portal because the redirect URI set by CHG-1068 was not registered at Sentinel ID. The incident lasted 45 minutes and was resolved by registering the new redirect URI. Incident commander: Lucas Moreau. CHG-1068 was deployed at 07:55 UTC.

Impact

Merchants were unable to access the merchant portal during the incident window. This prevented merchants from viewing payments, reports and settings. The outage affected login functionality across all merchant accounts using Sentinel ID for authentication. See STS-401 for status updates provided to merchants during the incident.

Timeline

- 07:55 UTC: CHG-1068 deployed to production
- 08:00 UTC: Merchants report login failures; alerts triggered
- 08:15 UTC: Incident commander engaged; RB-08 consulted
- 08:25 UTC: Root cause identified as unregistered redirect URI
- 08:40 UTC: New redirect URI registered at Sentinel ID
- 08:45 UTC: Login functionality restored; merchants able to access portal

Root cause

CHG-1068 introduced a new Sentinel ID redirect URI for the merchant portal SSO integration. The deployment proceeded without the corresponding redirect URI being registered in the Sentinel ID configuration. This mismatch caused authentication redirects to fail, blocking all merchant login attempts.

Resolution

The Merchant Experience team registered the new redirect URI at Sentinel ID. Once the configuration was updated, the SSO flow completed successfully and merchants regained access to the portal.

Follow-up actions

- Review deployment procedures for SSO configuration changes to ensure external provider registrations are completed before production deployments
- Update RB-08 to include verification steps for Sentinel ID redirect URI registration
- Audit other integrations with external SSO providers for similar misconfigurations
